

## ABSTRACT OF THE DISCLOSURE

A process for the preparation of organopolysiloxane resins, wherein  
a silane

- 5 or a hydrolyzate thereof,  
and a silane

- or a partial hydrolyzate thereof,  
are reacted with acidified water and a portion of alcohol distilled off;  
10 the mixture is then reacted in the presence of base and a water-insoluble organic solvent and water, alcohol and optionally a portion of water-insoluble organic solvent are removed;  
the mixture is then neutralized with acid, and any water, alcohol, and a portion of organic solvent are distilled off;  
15 the mixture obtained is then treated with organopolysiloxanes and precipitated salts formed are then removed, and optionally,  
the mixture is separated from water-insoluble organic solvent.
